6. Troubleshooting 23

1. Getting started

BISCS OS is the company HR system. It has two parts that share the same data:

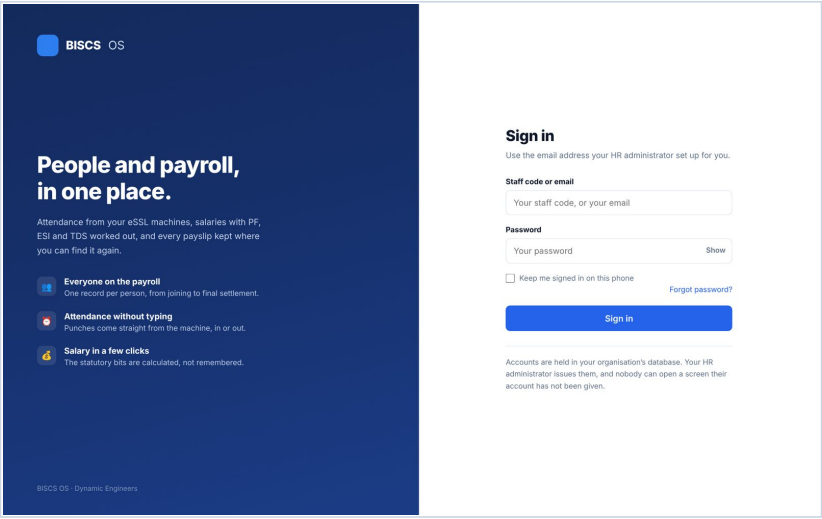

Part	Who uses it	Address
Admin web app	Owner, HR and administrators, on a computer	https://hrms.dynamicengineers.me
Employee phone app	Every employee, on their phone	https://hrms.dynamicengineers.me/app/

Who can do what

Role	Can do
Owner / Admin	Everything, including payroll, settings, user accounts and passwords.
HR	Employees, attendance, leave and requests, payroll and reports.
Employee	Only their own data: punch in/out, view own calendar, send requests, view payslips, change own password. Employees cannot open the HR dashboard or settings, and cannot edit attendance.

Signing in

- Use your **employee code** (the same code as on the eSSL biometric machine) or your **email**, plus your password.
- Forgot your password? Passwords are reset by your HR administrator from **Settings** → **Accounts**. After signing in you can change it yourself.
- Sessions end automatically after about 12 hours; just sign in again.

Admin sign-in page

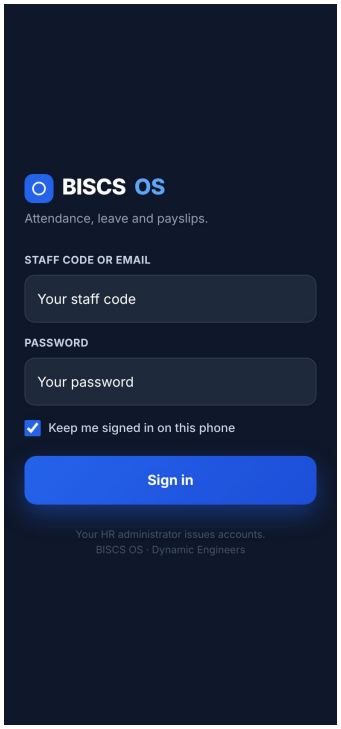

Install the phone app

The phone app installs from the browser - there is nothing to download from a store.

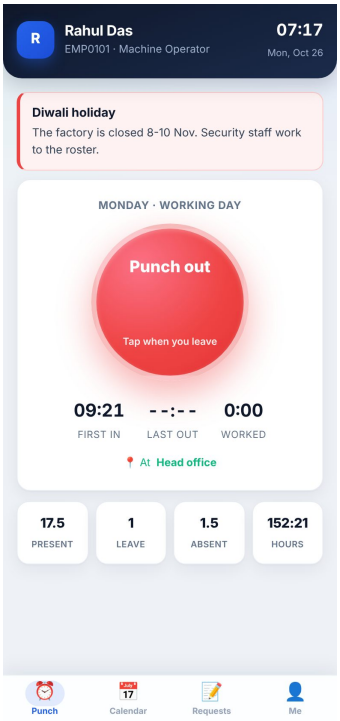

- **Android (Chrome):** open https://hrms.dynamicengineers.me/app/, tap the ■ menu, then **Add to Home screen** / **Install app**.
- **iPhone (Safari):** open the same address, tap the Share button, then **Add to Home Screen**.
- Open BISCS from the new home-screen icon. Allow **Location** when asked - punching needs it.

2. Employee phone app

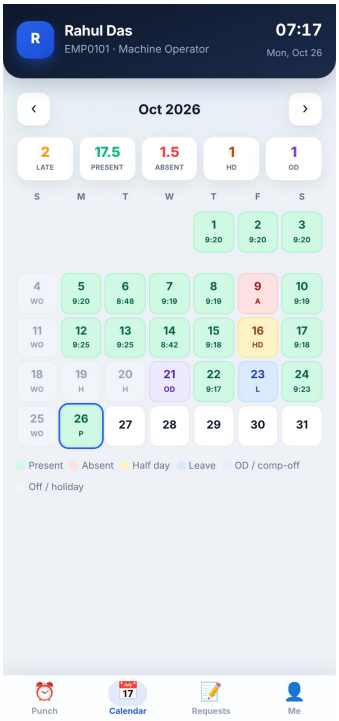

The phone app has four tabs at the bottom: **Punch**, **Calendar**, **Requests** and **Me**.

Sign in

Punch tab

Calendar tab

Punch in and out

1. Open the app and go to the **Punch** tab. Today's shift, your in time and worked hours are shown.
2. The location line shows **At <site name>** when you are inside a company site, or **About N m from <site>** when you are outside it.
3. Tap **Punch in** when you arrive and **Punch out** when you leave.

- The **first** punch of the day is your in time and the **last** punch is your out time. Extra taps in between do not change your in time.
- Punches from the eSSL biometric machine and the phone are combined into the same day.
- If you see "Location is blocked", allow location for the app in your phone settings - you cannot punch without it.

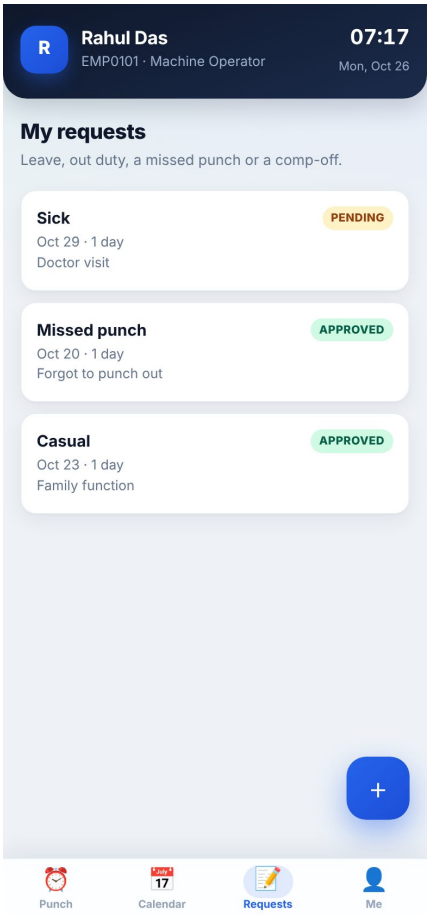

Calendar

The calendar shows each day of the month in colour. Summary cards at the top count the month:

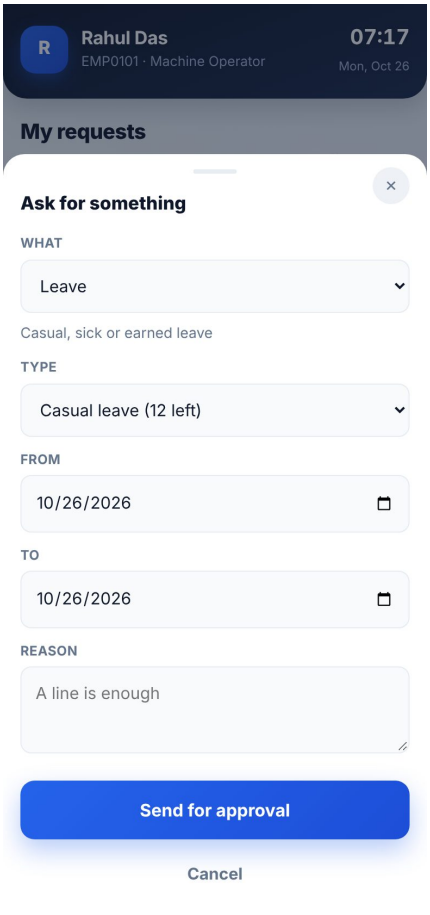

Card	Meaning
Present	All days worked (full days, half days and on-duty days).
Late	Days you came in after the shift start plus grace time.
Absent	Working days with no attendance and no approved leave.
HD	Half days.
OD	On-duty days (working outside the office, approved by HR).

> **Tip:** Use the arrows at the top of the calendar to look at past months. Tap a day to see its in/out times.

Requests

Requests tab

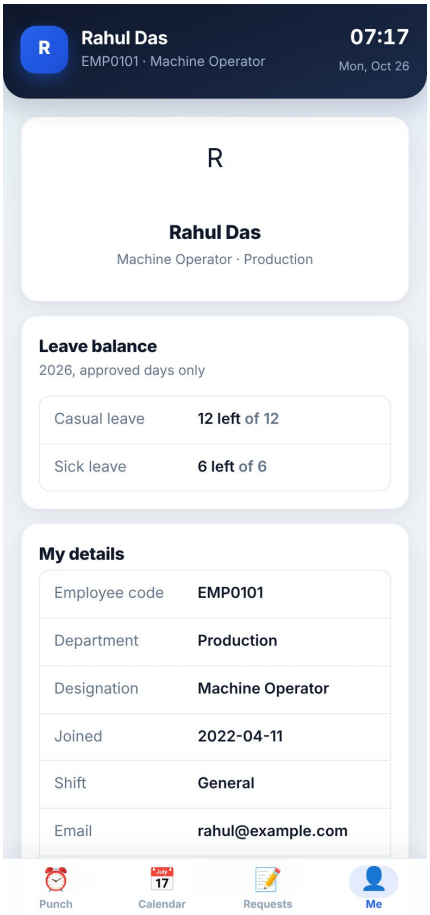

New request (+ button)

Tap the **+** button to send a request to HR. Choose the type, fill the dates and a short reason, then submit:

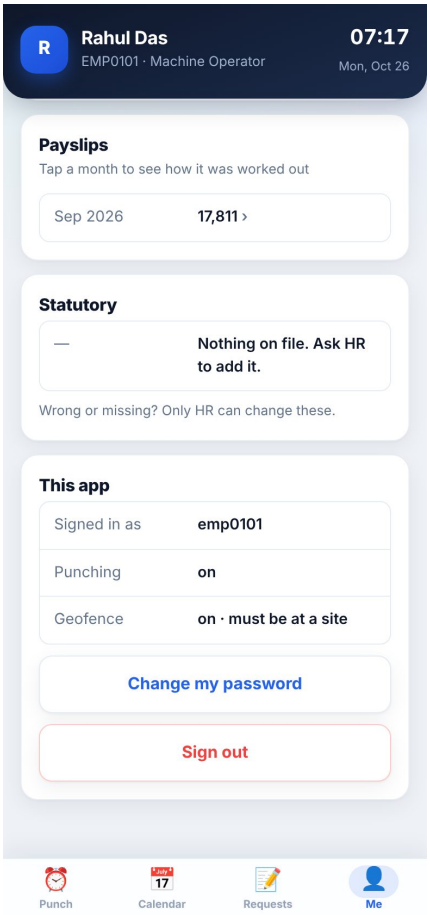

- **Leave** - casual, sick or other leave, full or half day.
- **Missed punch** - you forgot to punch; give the correct in/out time.
- **On duty (OD)** - you were working at another place.
- **Comp-off** - you worked on a holiday/weekly off and want a day off or payment later.

Every request shows its status: **Pending**, **Approved** or **Rejected**. Approved requests update your calendar automatically.

Me

Me - balances and details

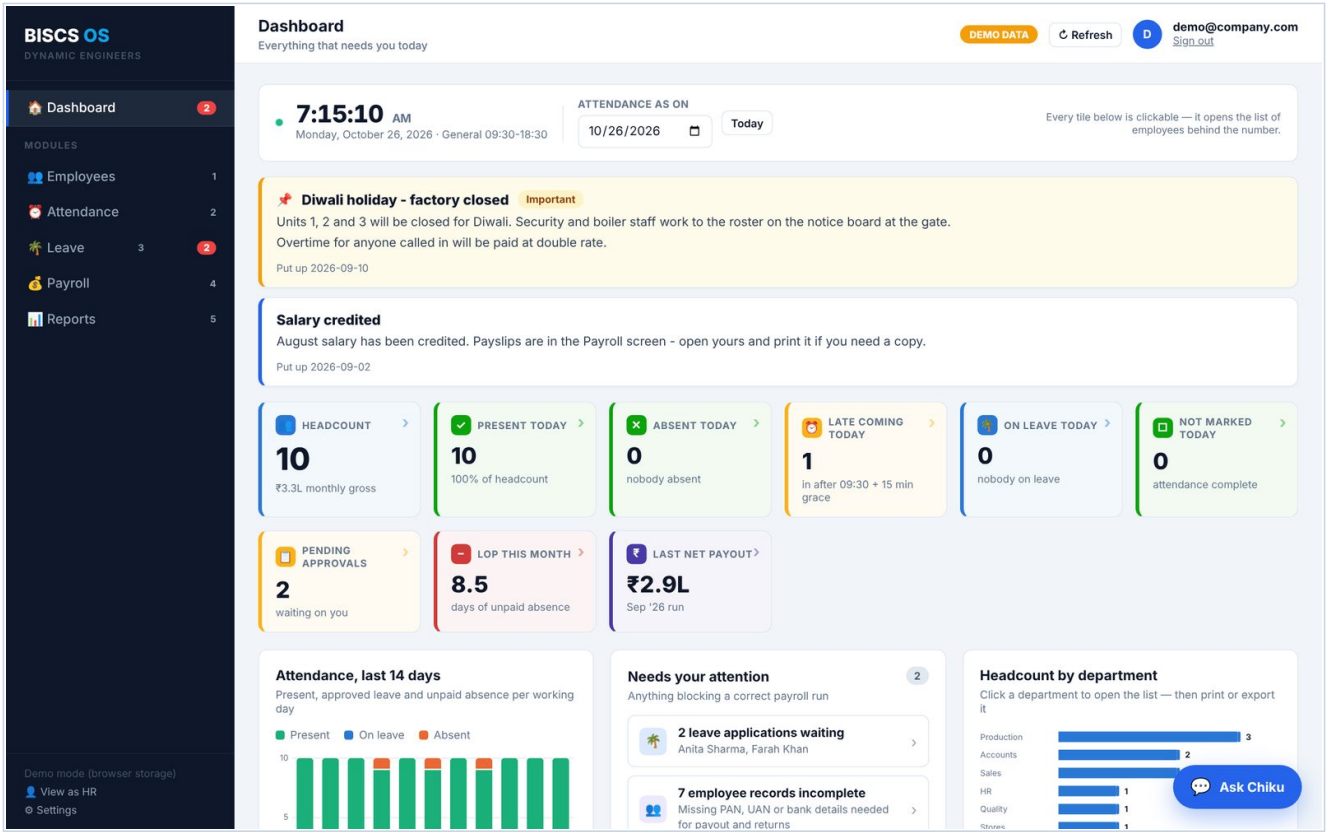

Me - payslips and account

- **Leave balance** - leave available for each leave type.
- **My details** - code, department, designation, shift.
- **Payslips** - open or print the payslip for any finalised month.
- **Change password** - enter the old password and a new one.
- **Sign out** - always sign out on a shared phone.

3. Admin web app

Sign in at https://hrms.dynamicengineers.me with an Owner, Admin or HR account. The menu on the left opens each module.

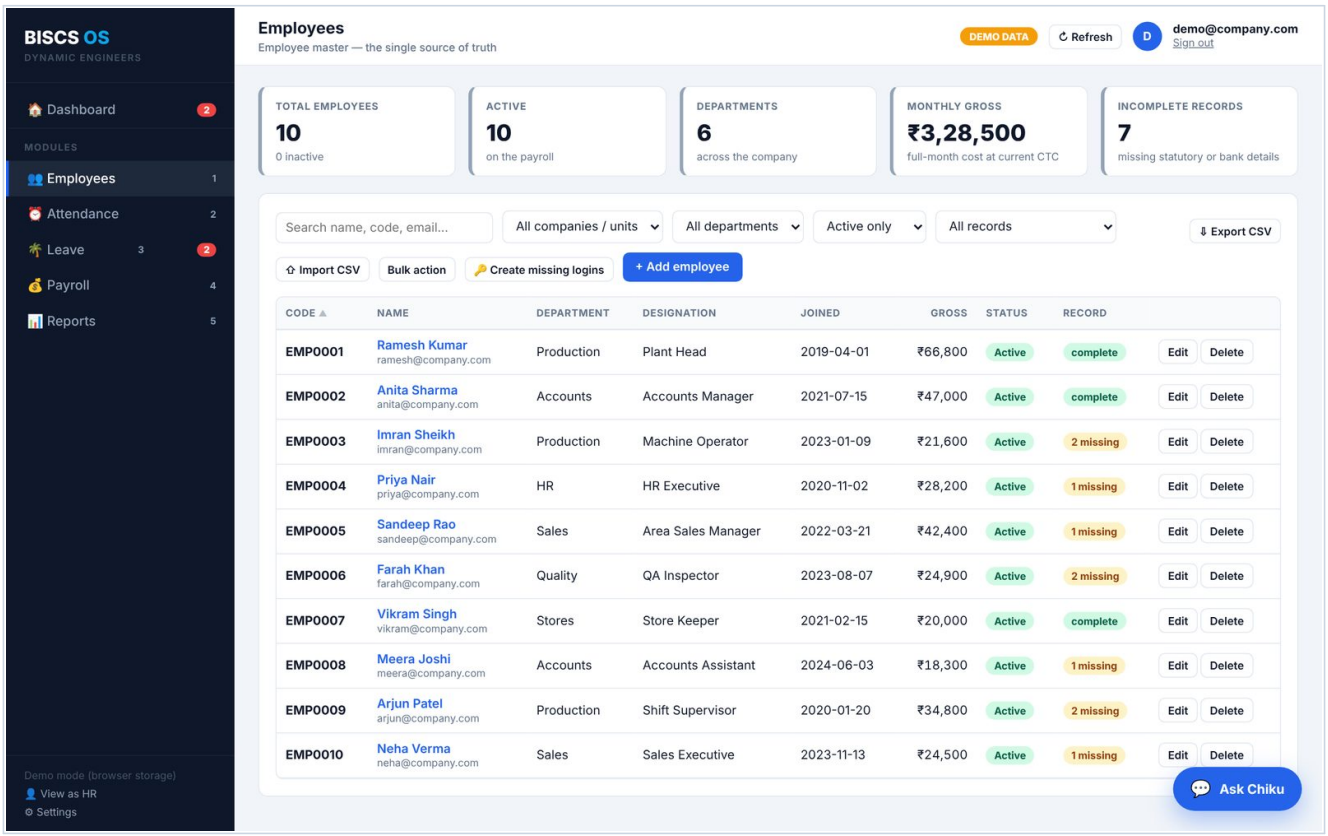

Dashboard

Dashboard - today at a glance

Shows today's headcount: present, late, absent and on leave, plus pending requests waiting for you.

Employees

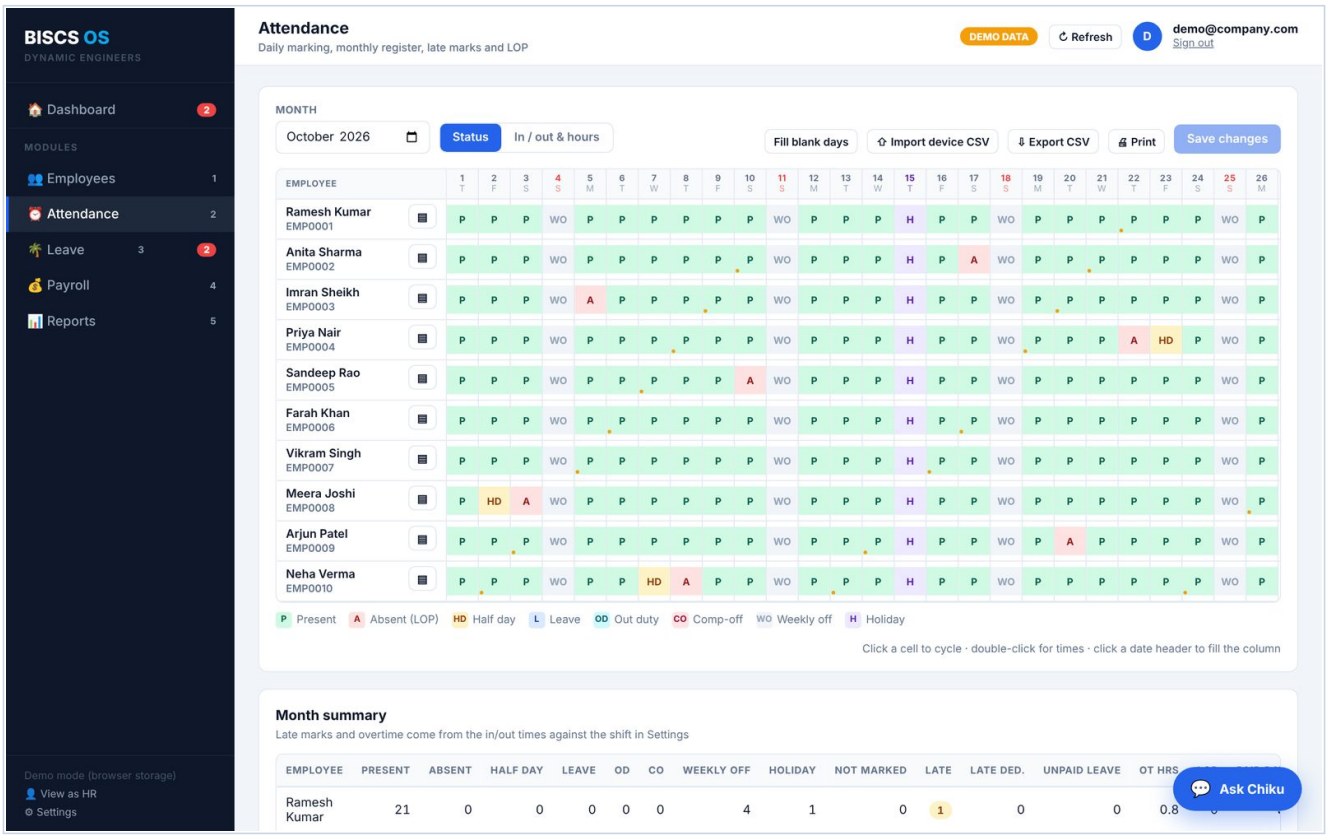

Employees list

- **Add employee** - enter the employee code **exactly as on the eSSL machine** (codes are never generated automatically), name, department, designation, shift, joining date, salary details and bank details.
- Click a row to edit. Set an exit date when a person leaves - they stay in history but drop out of new months.
- **Create missing logins** makes a phone-app login for every employee who does not have one yet.
- Bulk import from Excel is under **Settings** → **Import** → **Employee master**.

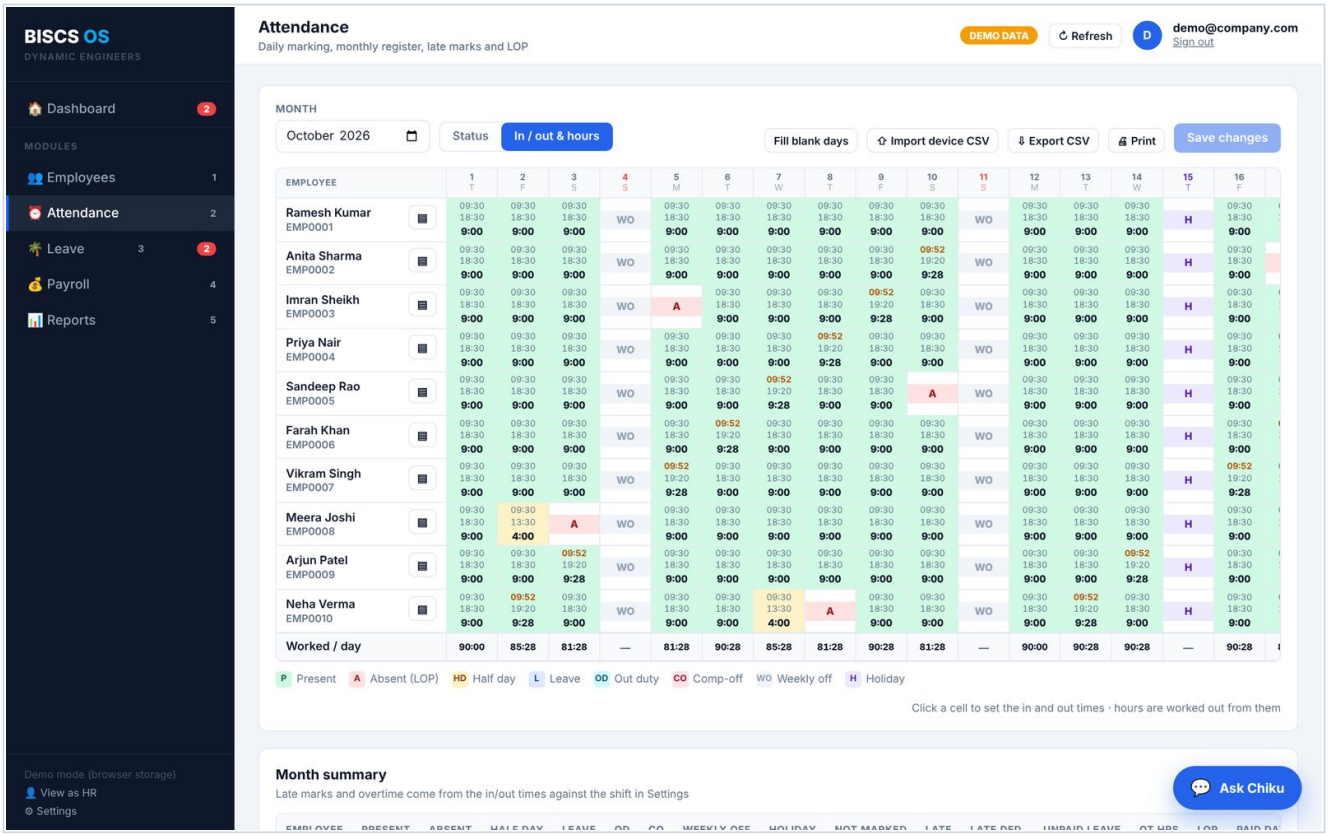

Important: The employee code is the link between the biometric machine and BISCS OS. If the codes differ, punches will not land on the right person.

Attendance

Attendance register - one row per employee, one column per day

The **register** view shows the status code for every day (P, A, HD, OD, L, WO, H). The **times** view shows in/out times and hours.

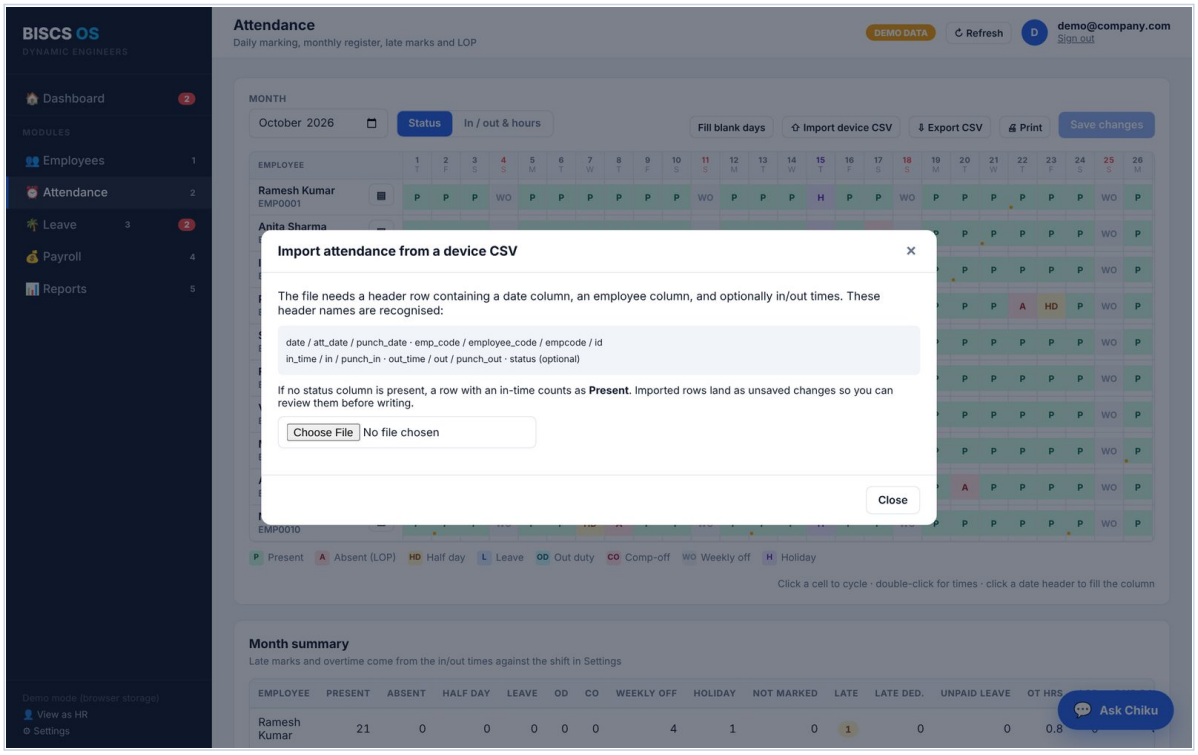

Attendance - in/out times view

- Click a cell to change the day's status, double-click it to enter in/out times, or click a date header to fill the whole column (HR only).
- **Fill blank days** marks unfilled past days using the shift, holidays and approved leave.
- Late marks are worked out from each employee's shift start and grace minutes.

Uploading the eSSL report (daily)

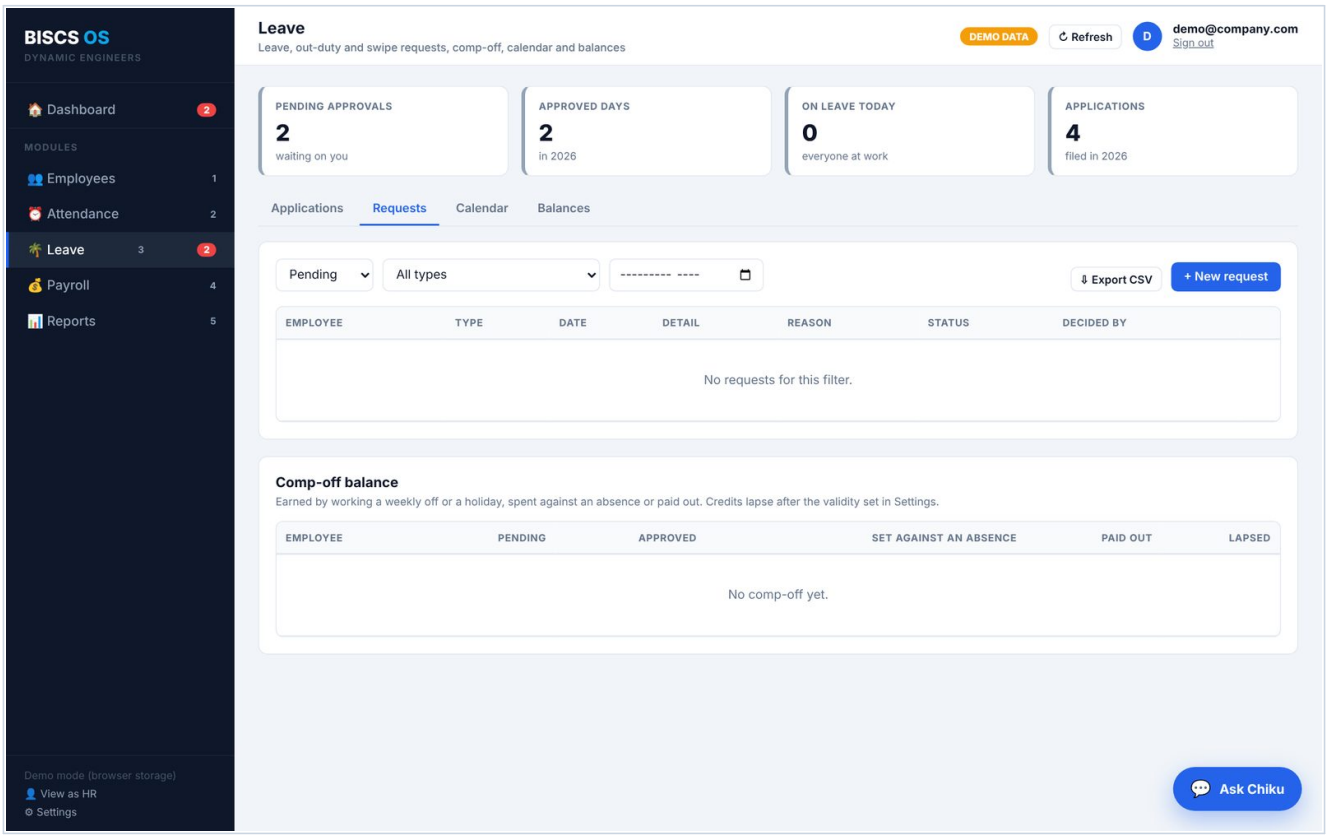

1. In eTimeTrackLite, export **Log Records (Employee Wise)** as .xls.
2. In BISCS OS go to **Settings** → **Import** (or the import button on Attendance).
3. Leave the type on **Detect automatically**, choose the file, check the preview, and click **Import**.

Importing punches into attendance

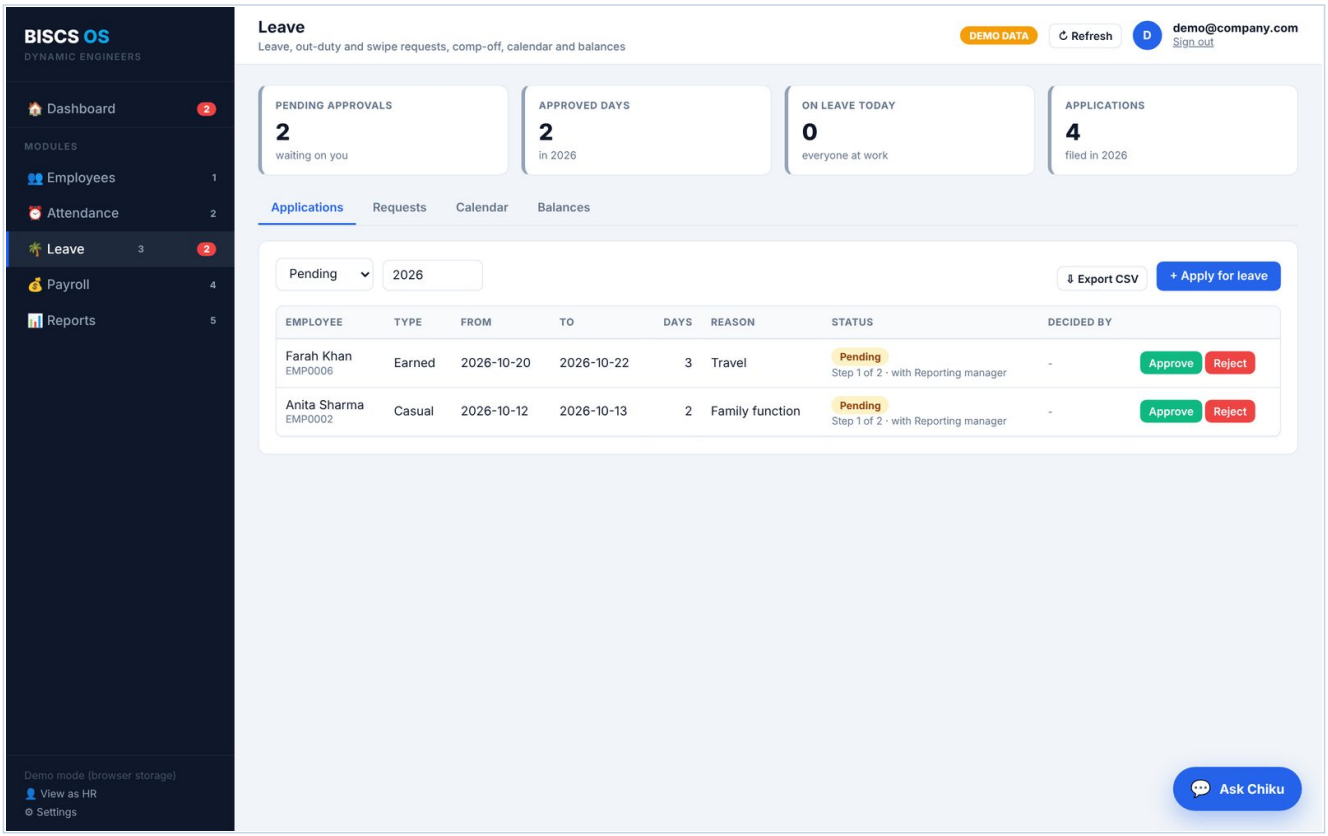

> **Tip:** Uploading the same file twice is safe - duplicate punches are ignored. You can upload a file covering several days at once.

Leave and requests

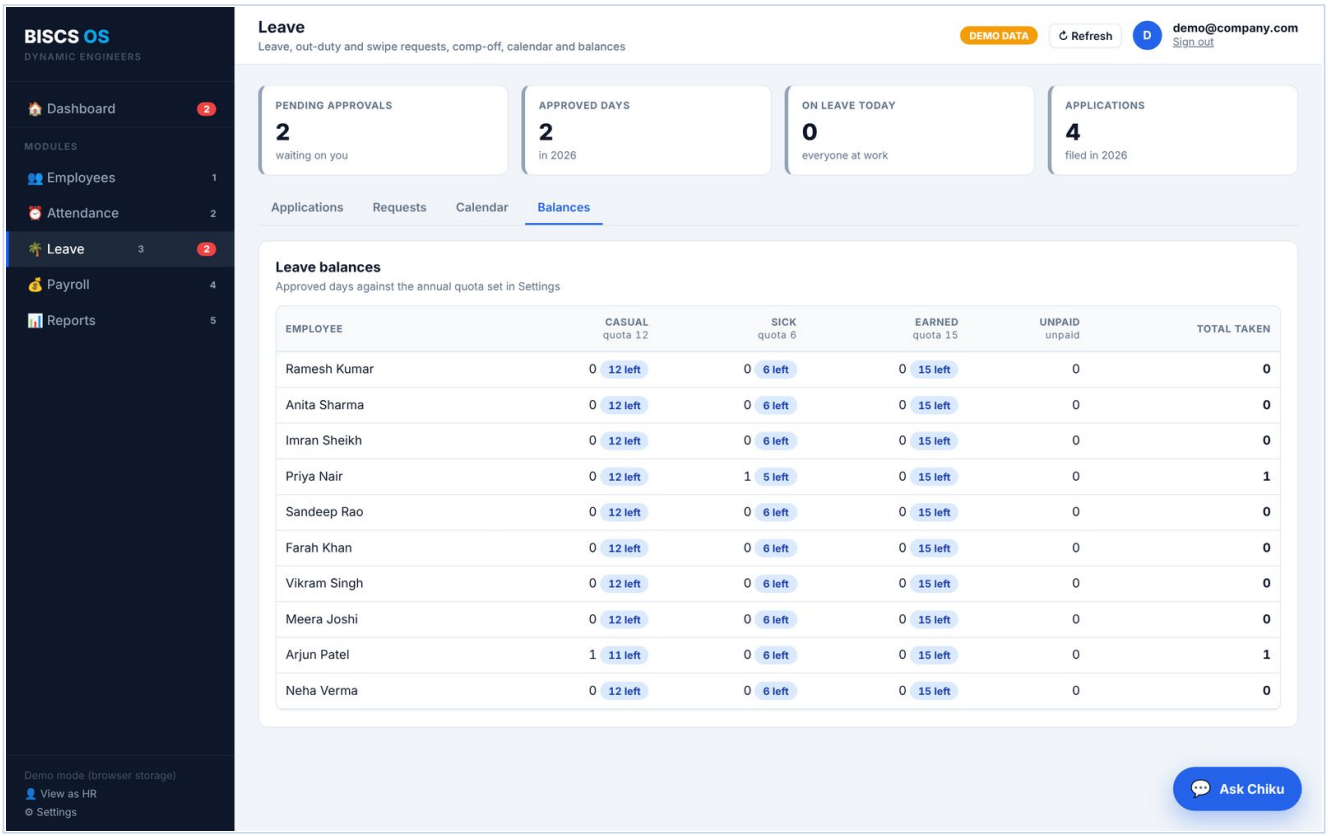

Requests waiting for a decision

- Open **Requests** to see leave, missed punch, OD and comp-off requests from the phone app.
- Click **Approve** or **Reject** and add a note if needed. The employee sees the result on their phone.
- Approved leave and OD are written into attendance automatically; approved missed punches add the punch.

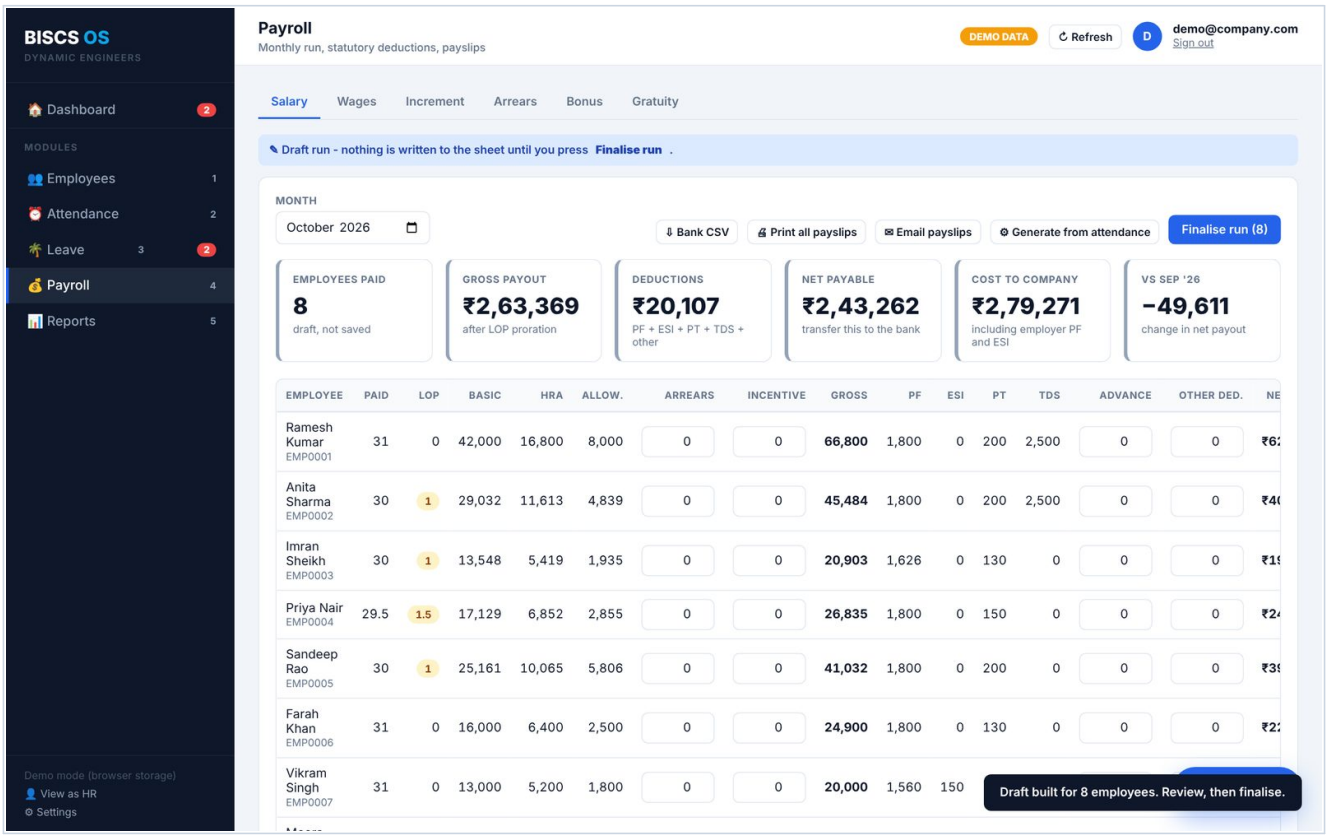

Leave records

Leave balances for each employee

Comp-off can be taken as a day off or paid. Comp-off that is not used or paid is picked up by **Arrears** (see below), and comp-off paid as arrear is marked "paid as arrear".

Payroll - Salary

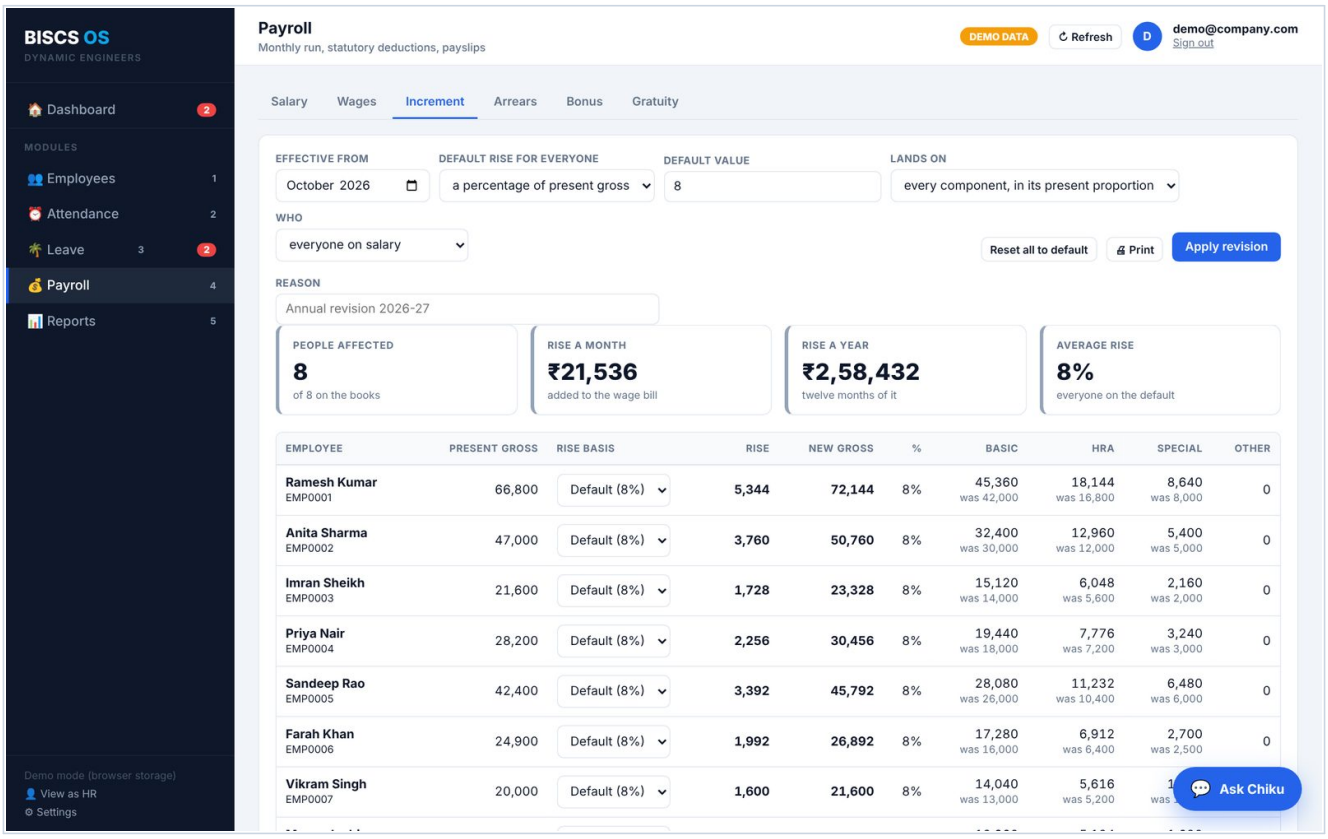

Generating the salary sheet for a month

1. Choose the month and click **Generate**. Salary is calculated from attendance, leave, holidays and each person's salary structure.
2. Review the sheet. You can adjust items such as arrears, advances or other deductions for a person.
3. **Finalise** the month when it is correct. A finalised month is locked.
4. Print payslips, or click **Email payslips** to send each person their payslip. Employees can also see payslips in the phone app.

Important: Finish attendance corrections and approve all requests for the month **before** you generate payroll.

Increment

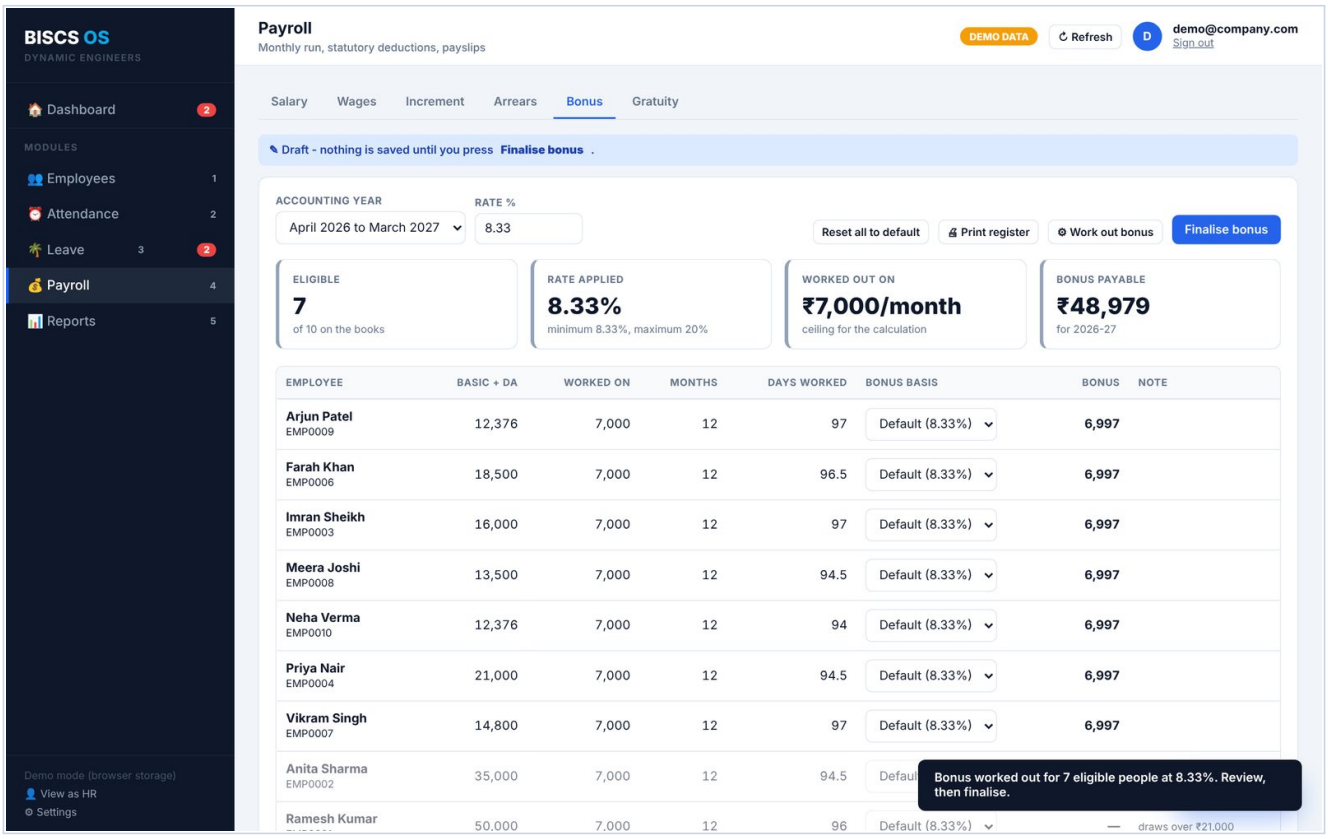

Increment - default rise at the top, per-person override in each row

1. At the top, set **Default rise for everyone**: choose **Percentage** or **Flat amount** and enter the **Default value** (for example 8%).
2. Every employee row starts on **Default**. To give someone a different rise, change their **Rise basis** drop-down to Percentage or Flat amount and type their value (for example 15% for a top performer, or Rs 2,000 flat).
3. Set the effective month and save. Each saved row is noted as "default: 8%" or "individual: 15%".
4. **Reset all to default** clears every individual change.

> **Tip:** If the increment takes effect from a past month, the back pay is calculated in **Arrears**.

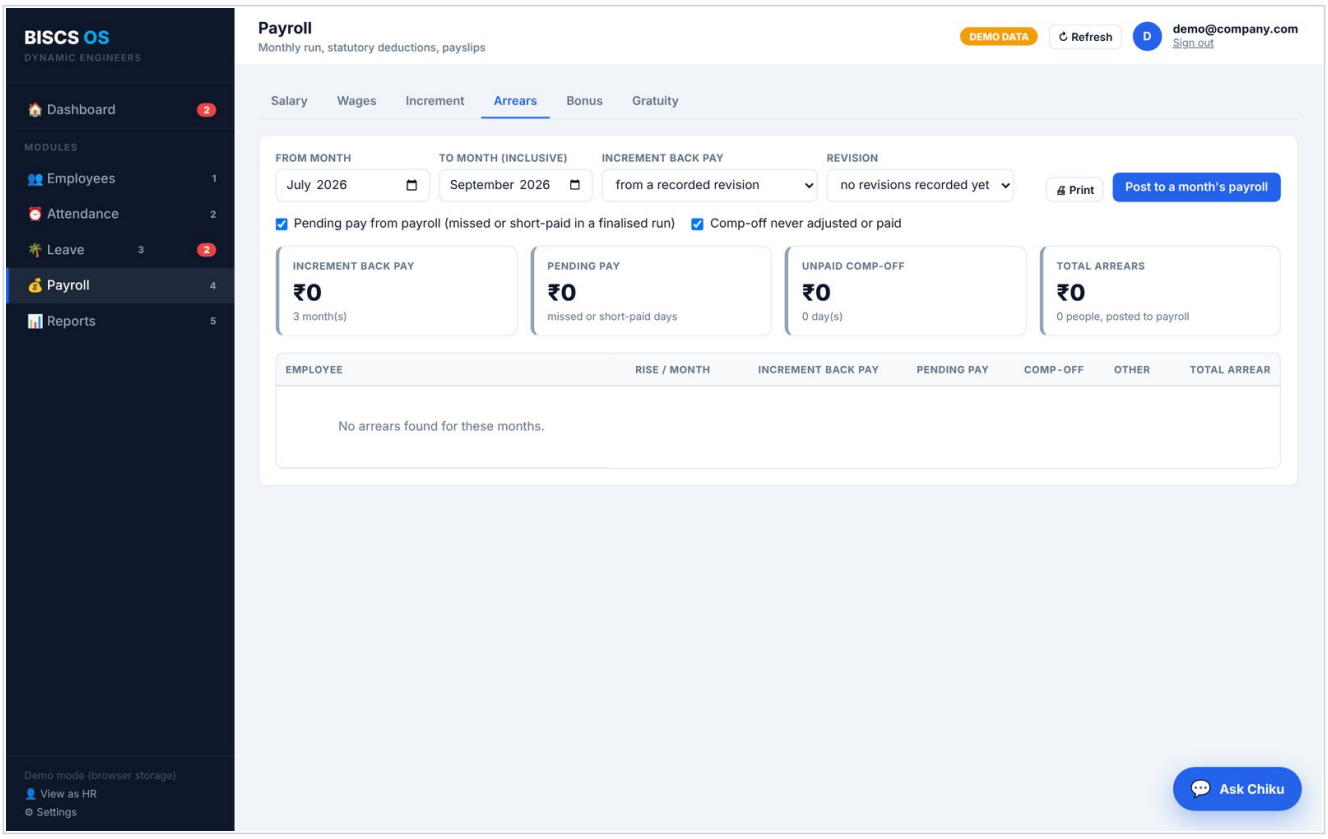

Bonus

Bonus - default at the top, per-person basis

Bonus works the same way: set a default percentage or flat amount at the top, then override person by person with the drop-down. A person given a flat amount is included even if the standard eligibility rule would leave them out. **Reset all to default** undoes overrides.

Arrears

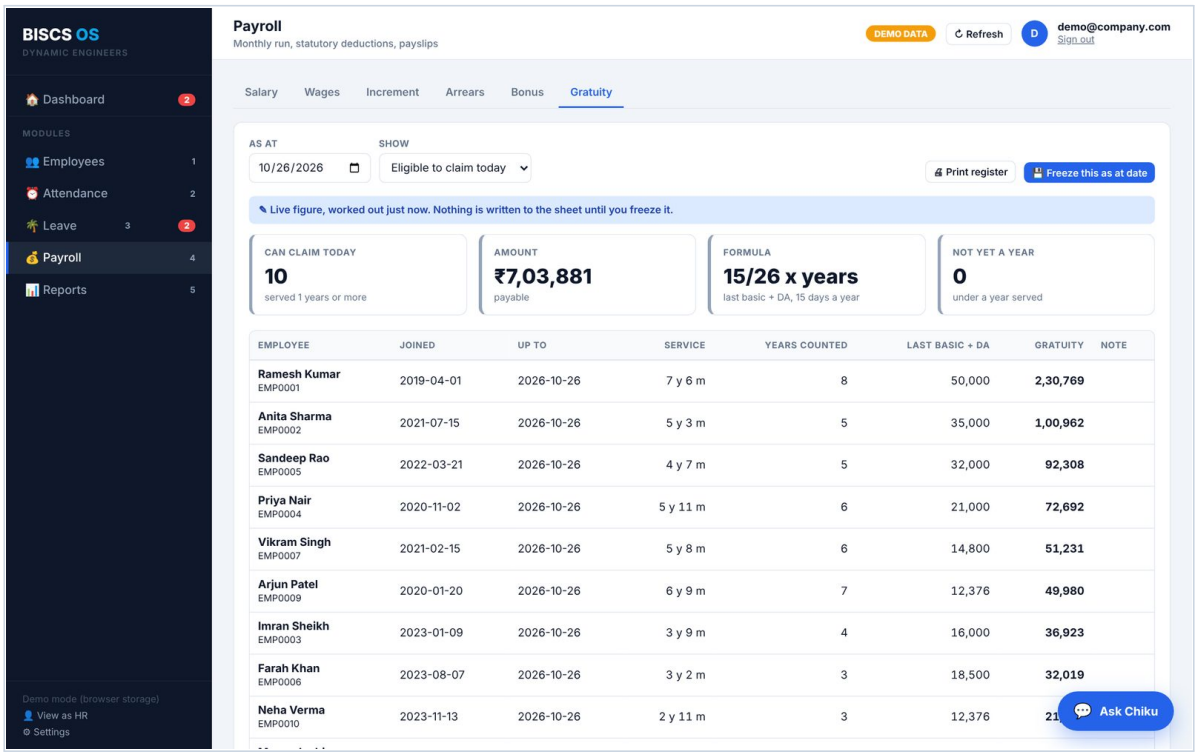

Arrears - all sources for each person, posted to payroll in one click

Choose the month range (from - to) and the payroll month to pay in. Each person's arrear is the total of:

Source	What is counted
Increment back pay	The increment difference for every month in the range that was paid at the old salary.
Pending pay	Amounts from earlier payroll months that were not yet paid out.
Comp-off	Comp-off days not taken and not paid in the past.
Other	Any extra amount you type for a person.

1. Tick or untick the sources you want to include.
2. Check the amounts, then click **Post to a month's payroll**. The amounts are added to the arrears column of that month's salary sheet.
3. Each source is marked as settled, so the same amount is never paid twice.
4. Use **Print** for an arrears statement.

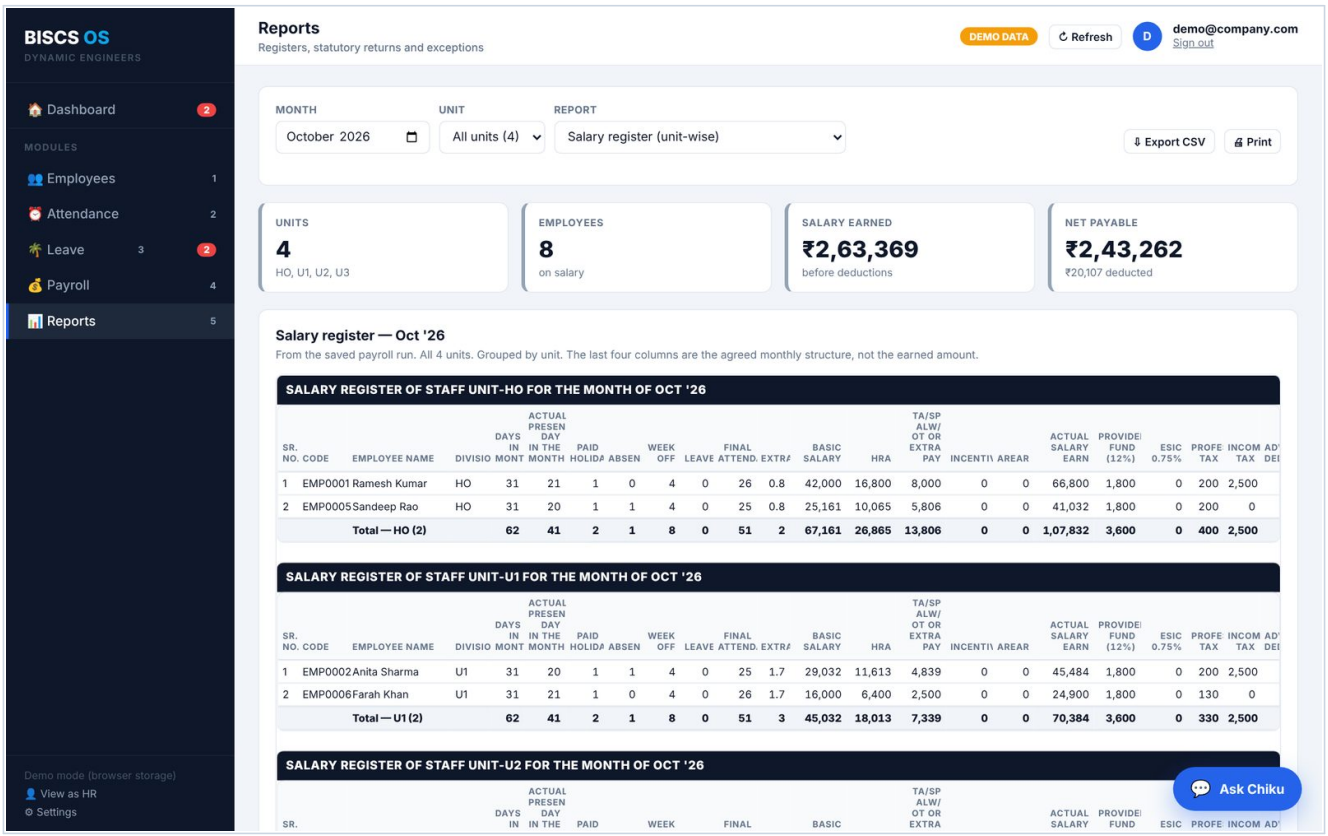

Gratuity

Gratuity calculation

Shows gratuity due based on years of service and last drawn basic salary.

Reports

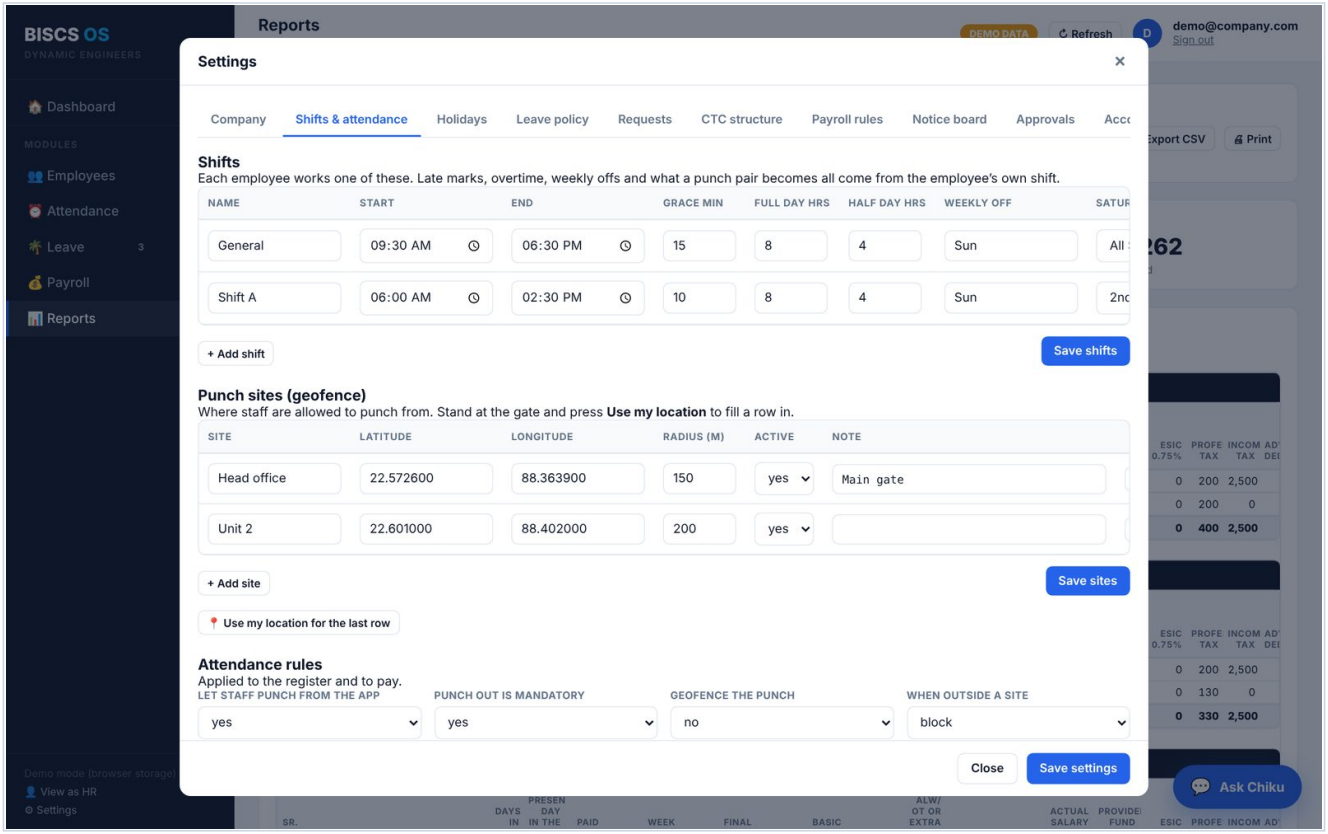

Reports

Monthly attendance summary, late report, leave register, salary register and more. Reports can be printed, and lists can be exported with **Export CSV**.

Settings

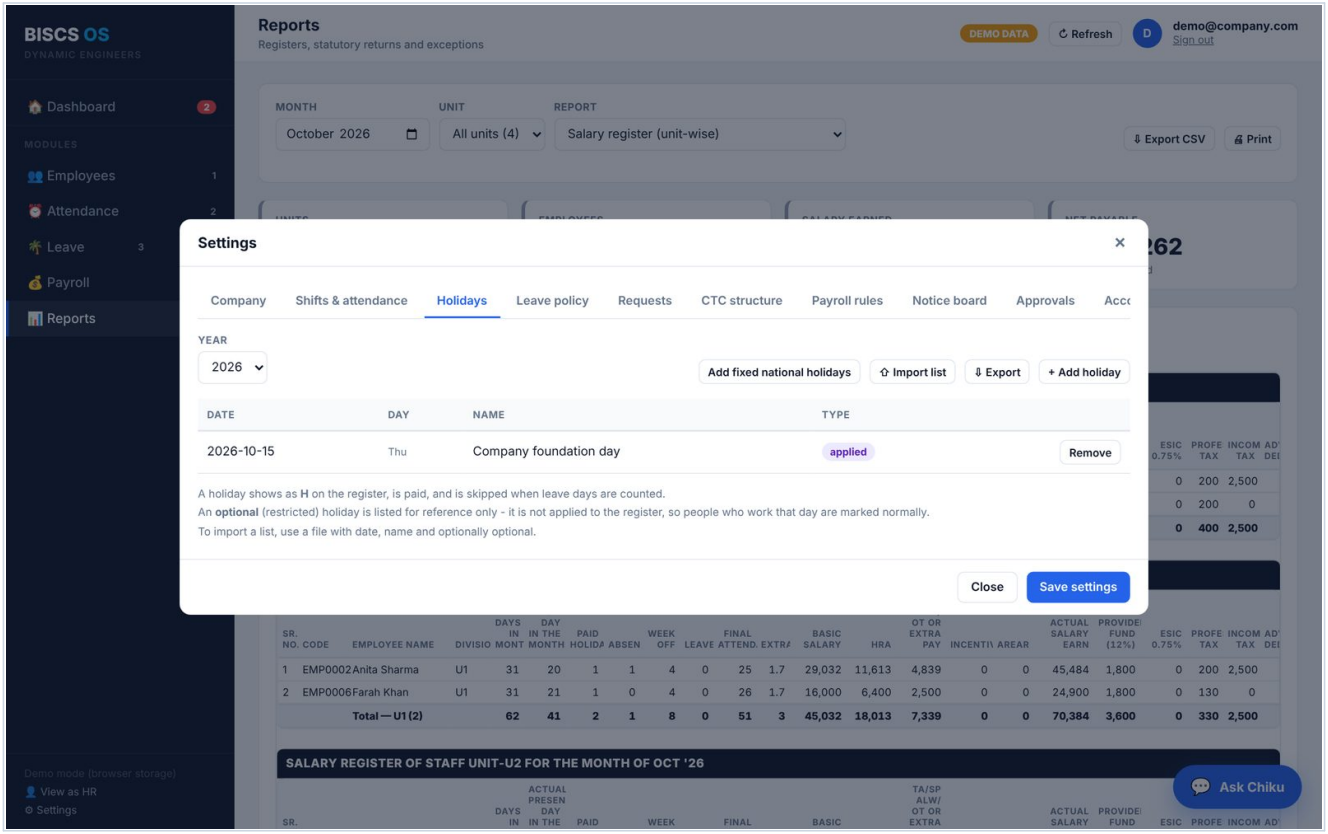

Only Owner/Admin should change settings.

Settings - shifts and sites

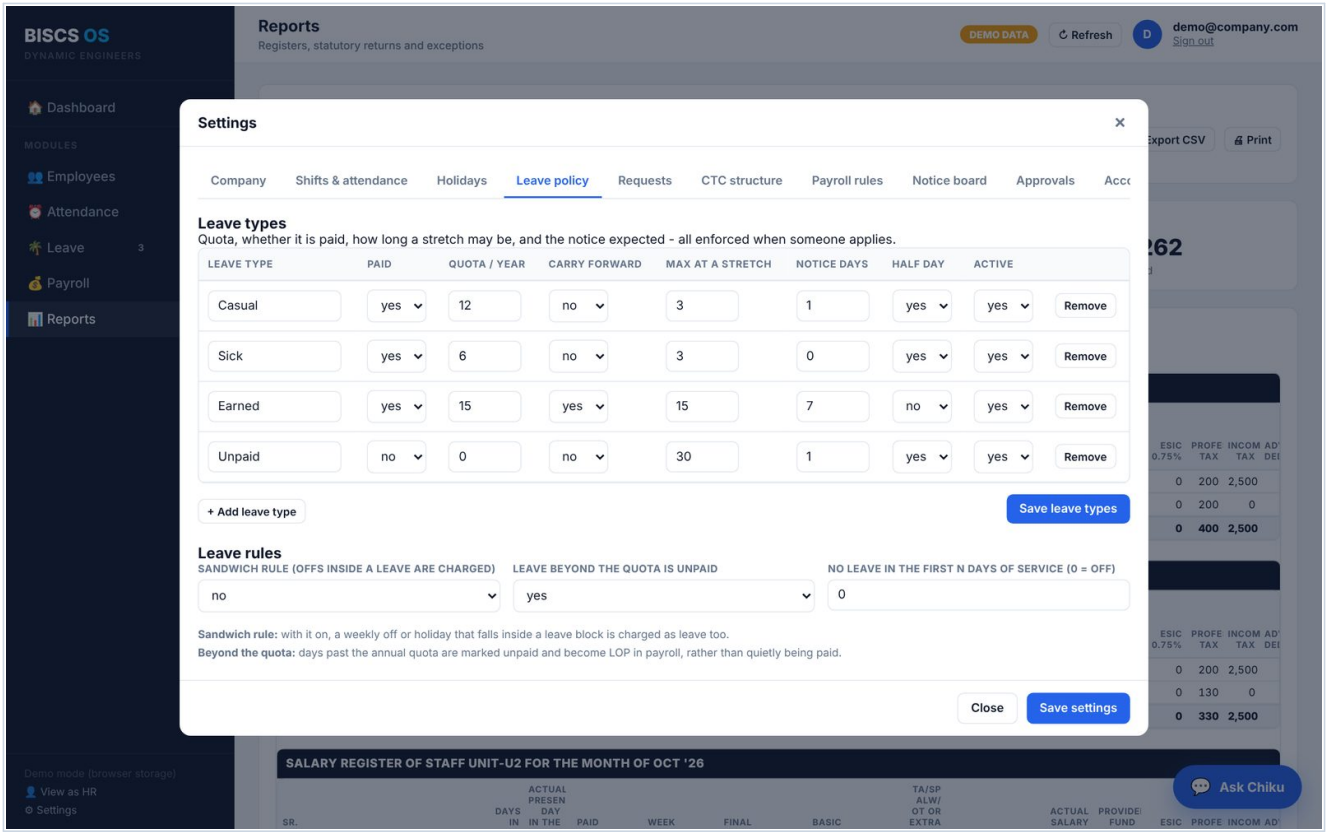

- **Shifts** - start/end time, grace minutes for late, half-day rules. Assign a shift to each employee.
- **Sites (geofence)** - company locations with a radius. Phone punches show the distance from the nearest site.
- **Default working hours** - default shift start/end, **minimum hours for a full day** and **minimum hours for a half day**, grace minutes, overtime start, weekly off and Saturday policy. A shift can set its own values; any it leaves blank use these.
- **Attendance rules** - app punching on/off, punch-out mandatory, geofence, late-mark slab and overtime pay.

Worked hours in a day	Day becomes
At or above the full-day minimum (e.g. 8 h)	**P** - Present
At or above the half-day minimum (e.g. 5 h), below full day	**HD** - Half day
Below the half-day minimum	**A** - Absent (flagged to verify)
Only one punch	**P**, flagged "single punch, verify"

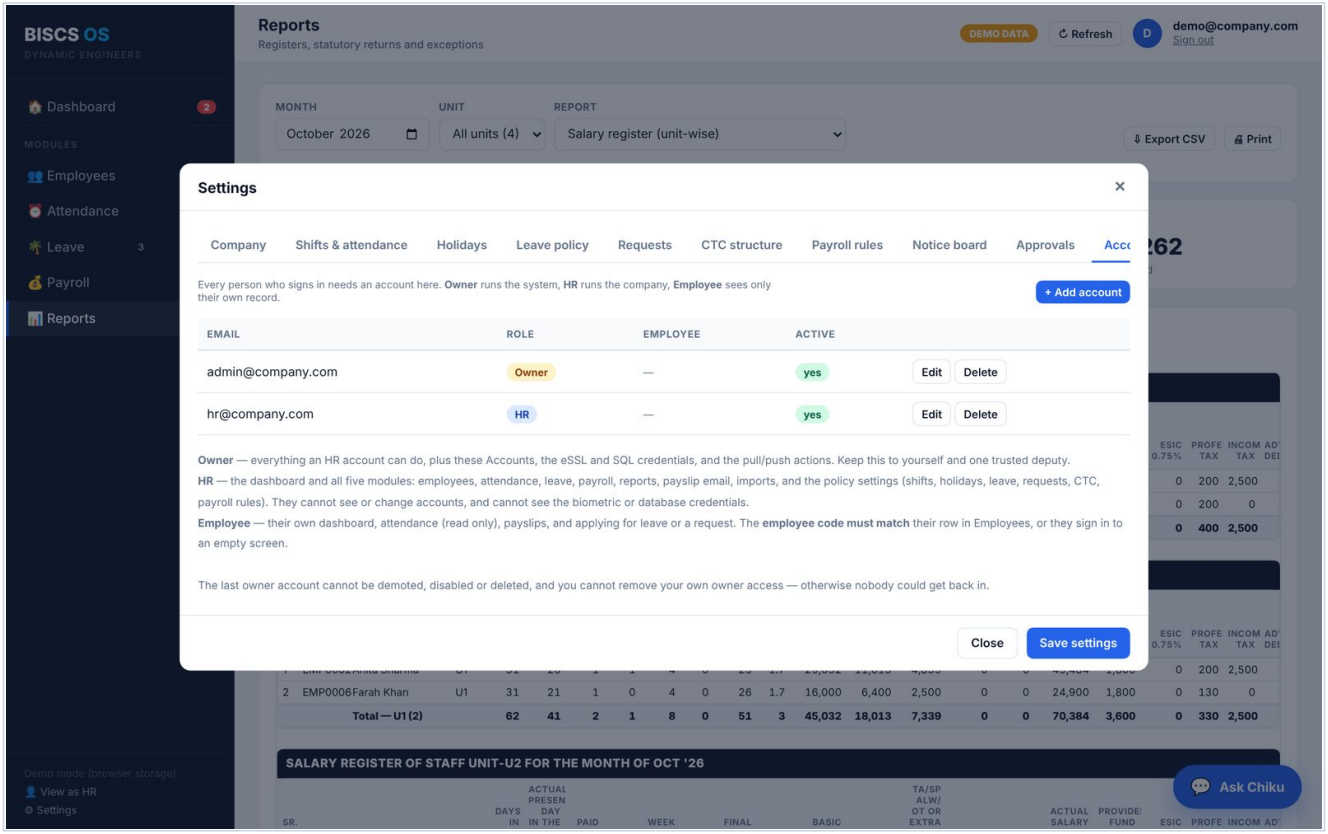

Settings - holidays

- **Holidays** - the yearly holiday list and weekly off days.

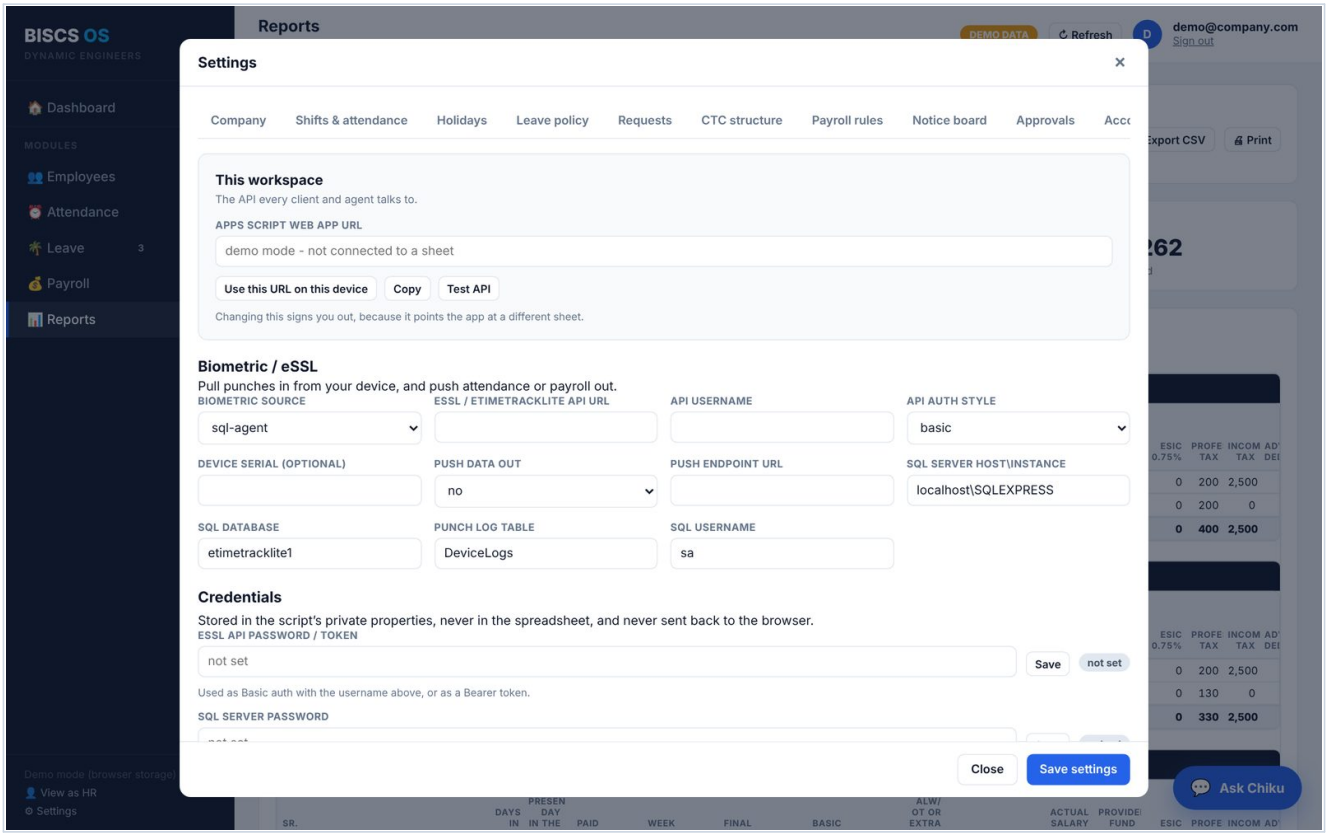

Settings - leave rules

- **Leave rules** - leave types, yearly quota, carry forward.

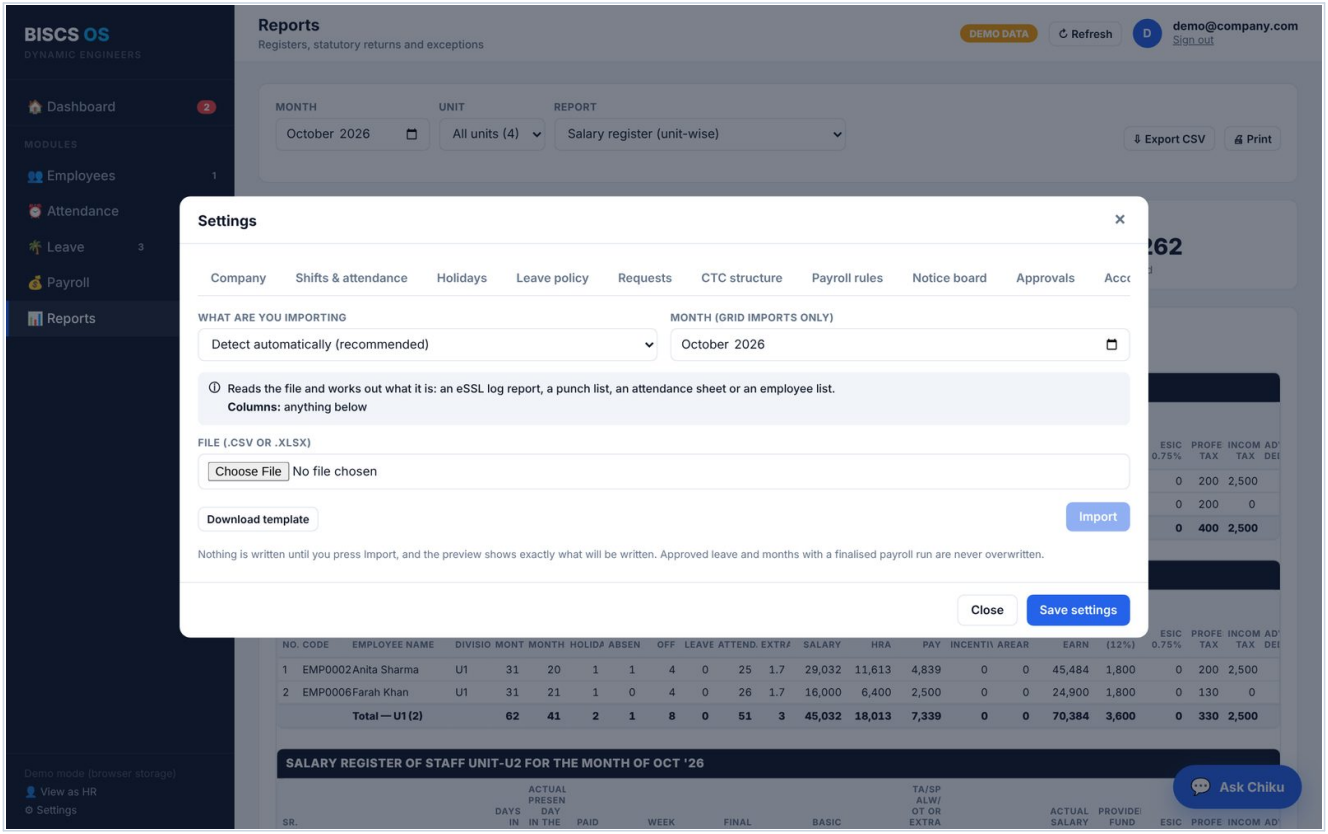

Settings - accounts and passwords

- **Accounts** - create logins, choose role (Owner, Admin, HR, Employee), reset a password, or remove a login. A password set here works on the next sign-in.

Settings - integrations

- **Integrations** - biometric machine connection and email settings.

Settings - import

Import accepts these file kinds:

- **Detect automatically** (recommended)
- eSSL **Log Records (Employee Wise)** report
- Biometric punch log
- Attendance - one row per day
- Attendance - month grid
- Employee master

4. Automatic data flows

Automatic punches from eSSL

Besides the daily .xls upload, the eSSL software can push punches to BISCS OS automatically ("Push to Web API"). The server address and push key are given to the eSSL engineer by the administrator - **keep the key private** and never print it on notices or share it in groups.

- The machine sends new punches as they happen; they appear in attendance within a minute.
- Response codes the eSSL engineer will see: **1** = saved, **0** = nothing new (duplicates), **2** = error (wrong key or bad data).
- Duplicates are ignored, so the daily .xls upload and the automatic push can both be used safely.

Google Sheet backup

A copy of the data is written automatically to the company Google Sheet on a schedule. The Sheet is a **backup only** - make all changes in BISCS OS, not in the Sheet. The **_Backup** tab in the Sheet shows when the last backup ran.

5. Monthly routine for HR

When	Task
Every day	Check the Dashboard. Upload the eSSL Employee Wise .xls if automatic push is not set up. Approve requests.
Every week	Look at Attendance for blanks or wrong days and correct them.
Month end (1st-3rd)	Approve all pending requests. Run Fill blank days. Check the late and absent counts.
Payroll	Post Arrears (if any) to the payroll month, then Generate salary, review, Finalise, and Email payslips.
Yearly / as needed	Increment and Bonus with default + individual values. Update holidays and leave rules for the new year.

6. Troubleshooting

Problem	What to do
Cannot sign in	Check the code/email and password. Ask HR to reset the password from Settings → Accounts.
"Location blocked" / cannot punch	Turn on phone location and allow location for the browser or the BISCS app, then reopen.
Phone app looks old	Close the app completely and open it again; it updates itself. If still old, open the address in the browser once.
Punches from the machine are missing	Check that the employee code in BISCS OS matches the machine exactly. Re-upload the Employee Wise .xls for those days - it is safe.
Wrong late / absent marks	Check the employee's shift and grace minutes, and the holiday list.
Password change does not work	The admin should open the setup page (#setup) and check the server address is the BISCS OS server.
Payslip missing in phone app	The month must be finalised in Payroll first.

For anything else, contact the HR administrator.
